

SDG 8 · DECENT WORK AND ECONOMIC GROWTH

Gram Udyam AI

Complete UI design book in sage green

Design system, 14 app screens, WhatsApp and IVR, officer dashboard, edge-case states and developer hand-off

Working title · Draft v1.0 · October 2026 · All data on screens is illustrative

Contents and design principles

Contents and design principles 2
Brand and colour 3
Typography, spacing and shape 4
Component library 5
User flow and navigation map 6
App screens S1 to S14 7
WhatsApp and IVR 14
Officer dashboard 15
States and edge cases 16
Developer hand-off 17

Design principles

1. **Calm and trustworthy**
   Soft sage green on warm white. One terracotta accent marks the single most important action on each screen.

2. **Voice first, icon second, text third**
   Anyone who can speak can finish onboarding. Every screen can be listened to.

3. **Numbers with honesty**
   Every score shows a confidence word and dots. Estimates are labelled as estimates.

4. **Never colour alone**
   State is carried by words, shapes and icons as well as colour.

5. **Light and offline-ready**
   Small first load, cached last results, data-saver mode, system fonts for fallback.

6. **Humans stay one tap away**
   Field agent, farm science centre and service centre are always reachable from Help.

Every figure on a screen (prices, scores, names such as ‘Mandi A’) is a placeholder to show layout, not a forecast.

Brand and colour

Sage green is the soft grey-green of dried herbs: it signals growth without the harshness of saturated green. A warm terracotta accent marks the one primary voice or action.

sage-50	sage-100	sage-200	sage-300	sage-400	sage-500	sage-600	sage-700	sage-800	sage-900
#F5F8F2	#E8EFE3	#D3DFCB	#BACBAE	#9CAF88	#7F9A6D	#5E7A50	#4A6240	#374B31	#263322
Page background	Cards, chips	Borders	Disabled, dots	Brand sage	Large text, icons	Primary buttons, headers	Pressed state	Dark headings	Phone frame, deep text

accent	accent-strong	sand	ink	muted	warning	error
#C47A53	#A4562F	#F3ECDD	#1E2A20	#566558	#D9A441	#B5524A
Decorative accent, voice button	Accent text and filled buttons	Soft notes	Body text	Secondary text	Caution	Errors, losses

Contrast (calculated, WCAG 2.2)

Aa 16	White on sage-600	4.80 : 1	Text: Pass	Large: Pass
Aa 16	White on sage-700	6.75 : 1	Text: Pass	Large: Pass
Aa 16	Ink on sage-100	12.71 : 1	Text: Pass	Large: Pass
Aa 16	Ink on sage-50	13.92 : 1	Text: Pass	Large: Pass
Aa 16	sage-800 on sage-100	8.08 : 1	Text: Pass	Large: Pass
Aa 16	White on accent-strong	5.32 : 1	Text: Pass	Large: Pass
Aa 16	White on accent	3.36 : 1	Text: Fail	Large: Pass
Aa 16	sage-500 on white	3.11 : 1	Text: Fail	Large: Pass
Aa 16	Muted on white	6.18 : 1	Text: Pass	Large: Pass
Aa 16	White on sage-700 (language chips)	6.75 : 1	Text: Pass	Large: Pass

Rule: sage-500 and the plain accent are decoration, large text and icons only. Body text and button labels use sage-600 or darker, ink, or accent-strong.

Colour balance on a typical screen

Typography, spacing and shape

Noto Sans with matching Noto script families keeps every Indian language consistent. Sizes below are CSS pixels, drawn here at true point size.

Display · 28 px — **Find your business**

Heading · 22 px — **Best for you**

Title · 18 px — **Millet snack unit**

Body · 16 px — You can start this from home with savings of ₹50,000.

Caption · 14 px — Based on prices from 14 mandis

Label · 12 px — **CONFIDENCE · MEDIUM**

Rules

- Body 16 px, never below 14 px; line height 1.5; maximum line length about 45 characters on phones.
- Font stack: Noto Sans, then Noto Sans Devanagari, Tamil, Telugu, Bengali and others, then system-ui.
- Use weight 600 for emphasis and numbers; avoid italics for Indian scripts.
- Rupee amounts use Indian digit grouping (₹1,20,000) in lists and ‘₹1.2L’ only in tight cards.
- Allow 200% system font scaling without clipping: cards grow vertically.

Spacing scale (4 px base)

Corner radius and depth

Depth comes from 1 px sage-200 borders and tone steps (sage-50 page, white card, sage-100 inset), not heavy shadows. Only bottom sheets and dialogs use a soft shadow (0 8 24 / 12% sage-900).

Touch targets and layout

- Minimum 48 × 48 px target; 8 px gap between targets.
- Single column on phones; 16 px side gutters; bottom navigation with four tabs.
- Primary action sits in the thumb zone at the bottom of the screen.
- Tablet and desktop widen to a two-column layout (list and detail).

Component library

The reusable parts behind every screen. Build these once in the front-end library and compose screens from them.

Bottom navigation and icon set

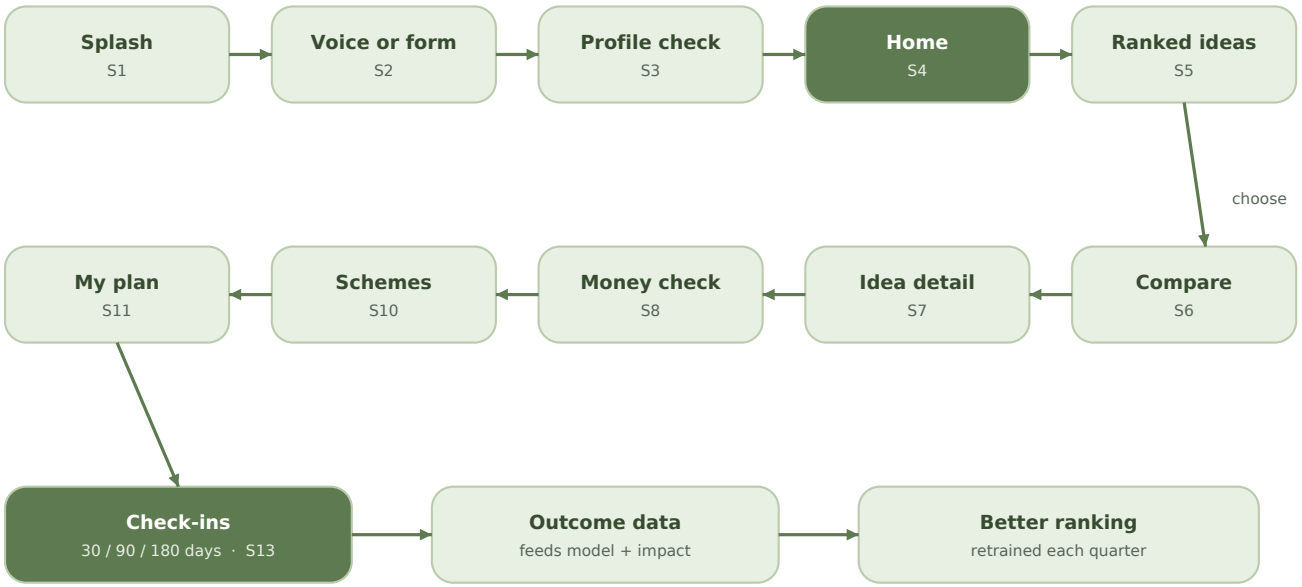

Home
Ideas
Plan
Help

Icons are simple filled shapes with a text label. Replace with a licensed open icon set (for example Lucide or Material Symbols) in production, keeping the 24 px grid and 2 px stroke.

User flow and navigation map

From first open to the 180-day follow-up. Solid arrows are the main path; branches show where help, offline mode and privacy controls attach.

Always available

- **Help · S12** — voice, agent, KVK, CSC
- **Market pulse · S9** — buyers and mandis
- **Settings · S14** — language, text, consent
- **Offline mode** — saved ideas and plan

Channels that join the same journey

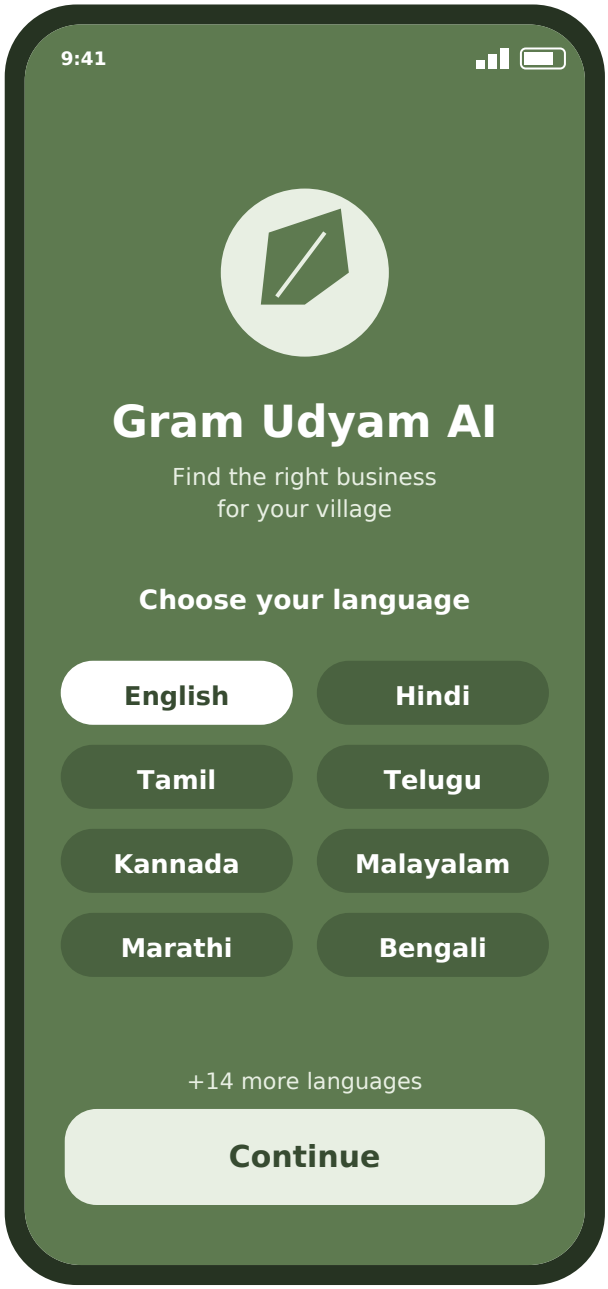

- **WhatsApp bot** — voice note in, cards out
- **IVR / SMS** — feature phones
- **Field-agent mode** — assisted sessions
- **Officer dashboard** — aggregated view

All channels use one profile, one recommendation service and one consent record.

Tab structure

Home	Ideas	Plan	Help
Greeting, top idea, prices, plan progress	List, filters, compare, idea detail, money check, market pulse	Schemes, documents, timeline, PDF, check-ins	Ask by voice, nearby help, settings and privacy

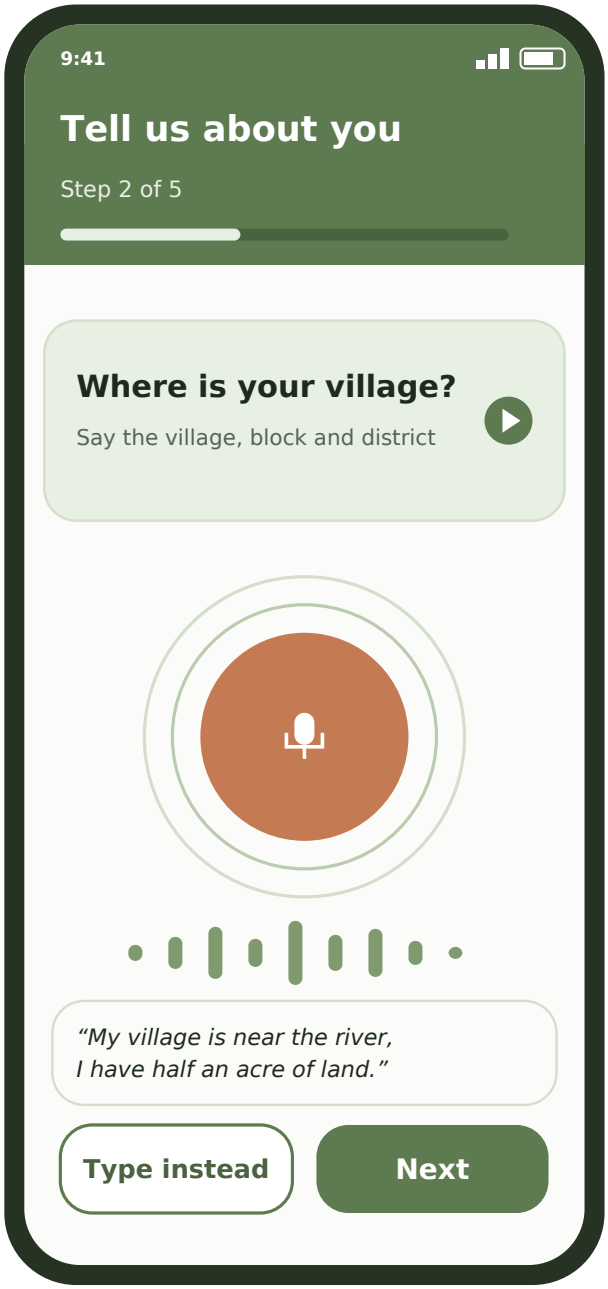

App screens

S1 Splash and language

First thing a new user sees. One tap to choose a language; the choice is remembered and drives voice, text and PDF output.

- Sage-600 full-bleed background with the leaf mark.
- Eight languages visible, remaining behind ‘more’.
- Selected chip inverts to white for clear state.

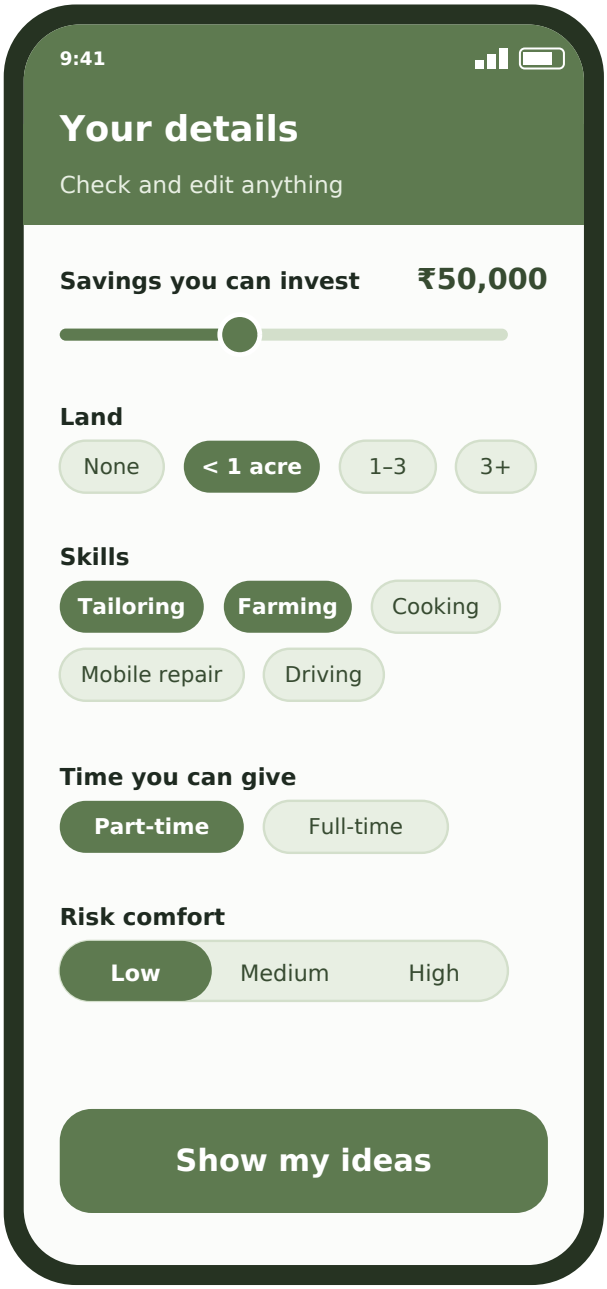

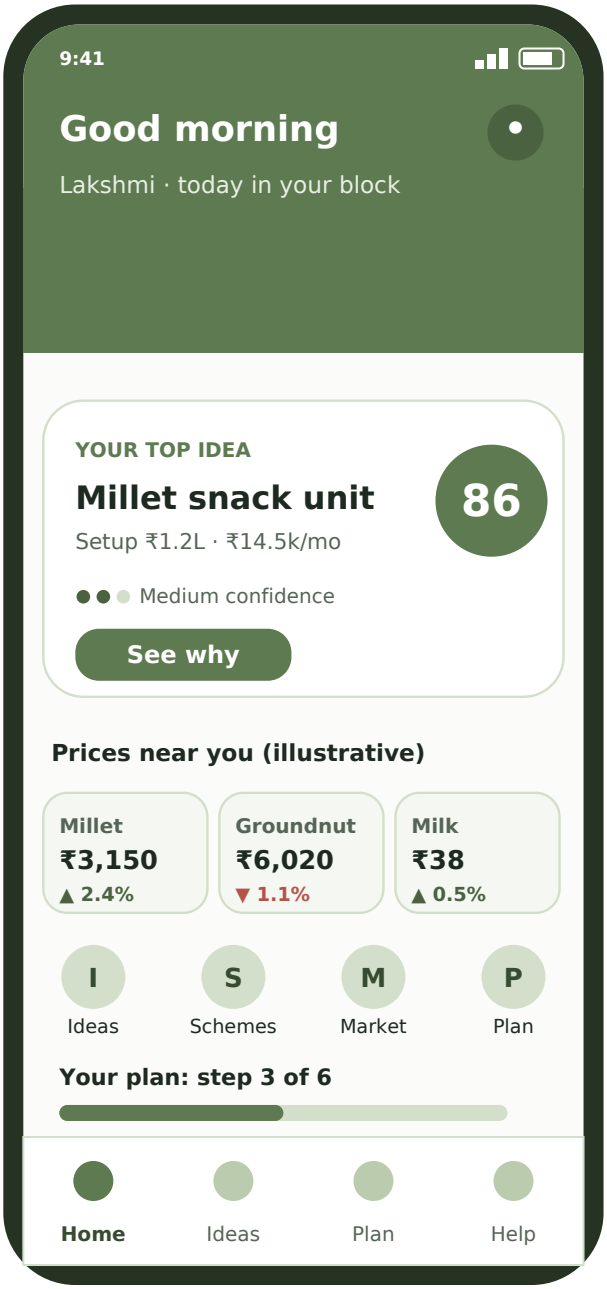

S2 Voice onboarding

A guided, spoken conversation. One question per screen, with the answer shown as text so it can be corrected.

- Large terracotta mic is the only accent on the page.
- Waveform confirms the phone is listening.
- ‘Type instead’ is always one tap away.

App screens

S3 Profile check

A single review screen after the conversation. Everything is editable with big chips and one slider.

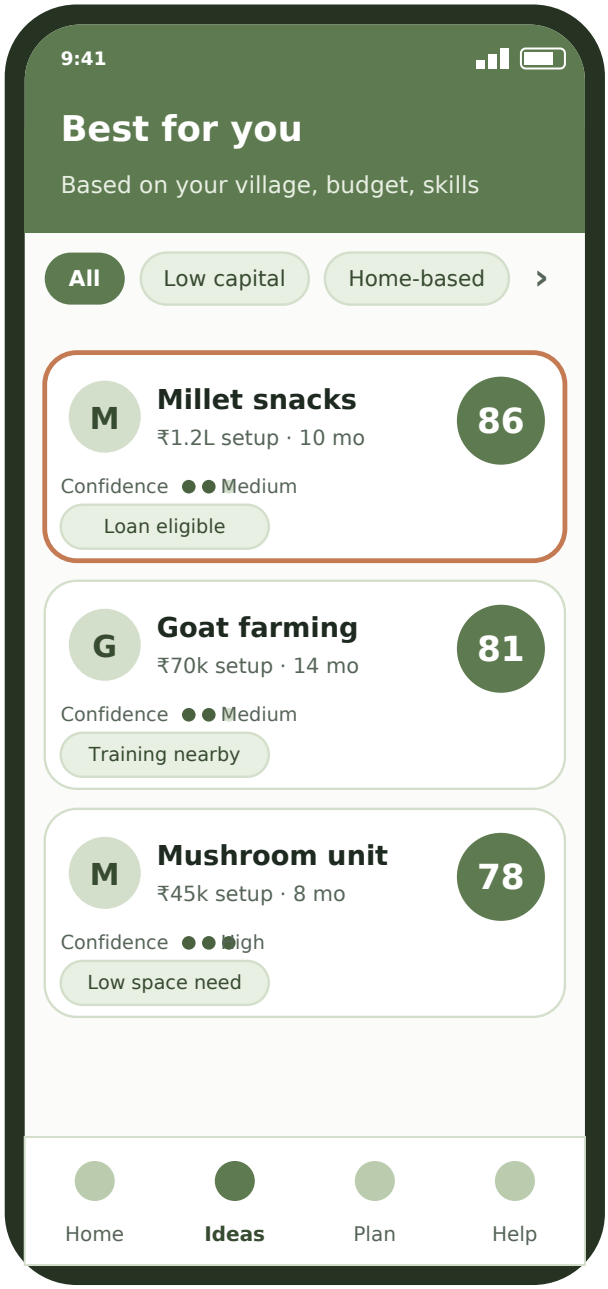

- Chips replace typing for land, skills and time.
- Savings shown as a rupee amount, not a range code.
- Primary button reads as the next outcome.

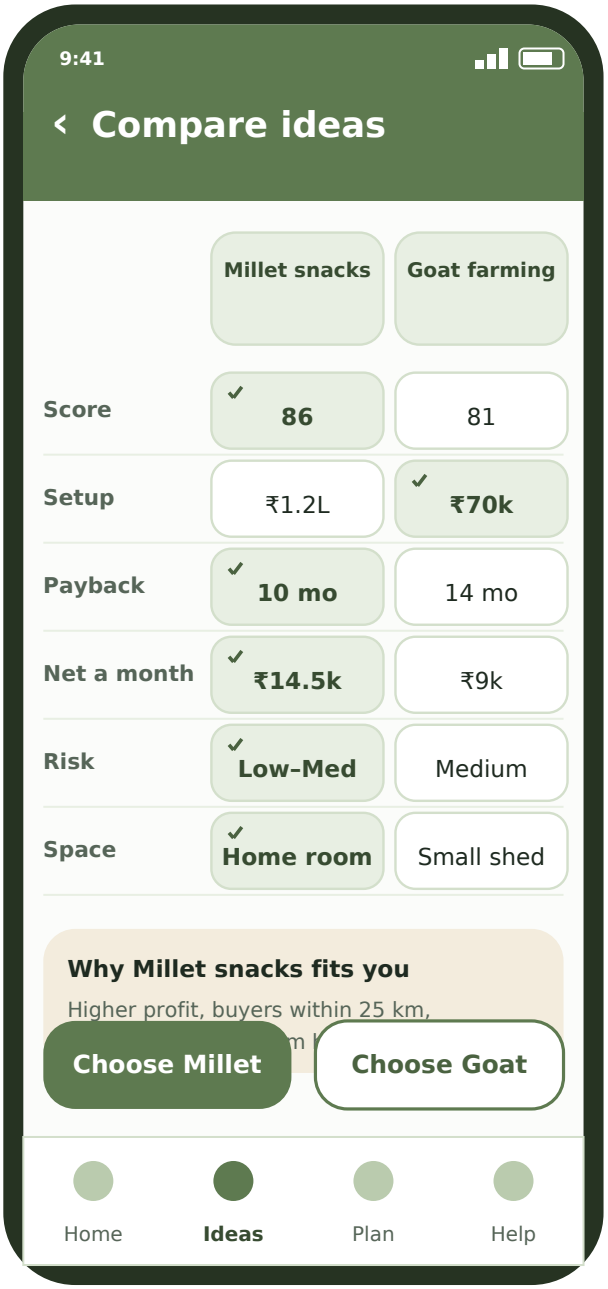

S4 Home

Orients the user: best idea today, local prices and progress on the plan.

- Top idea card shows score, money and confidence.
- Price tiles carry arrows and numbers, not colour alone.
- Plan progress bar sits above the bottom navigation.

App screens

S5 Ranked ideas

The core list. Each card has a score badge, key numbers, a confidence word with dots and one benefit tag.

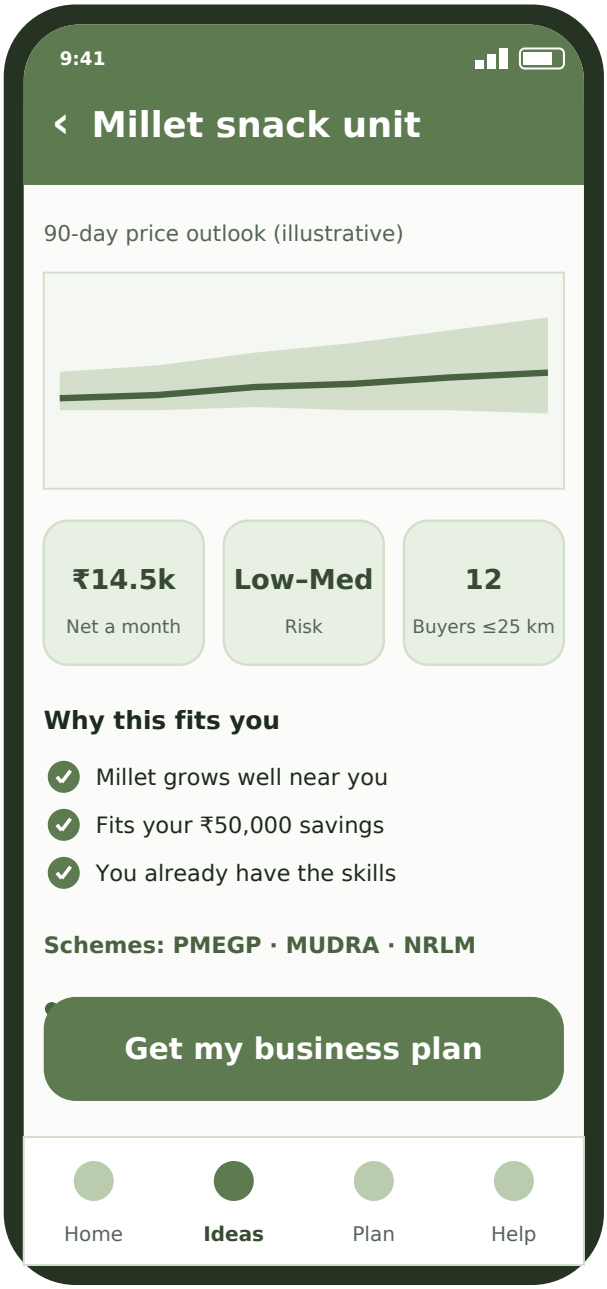

- Top card gets a terracotta outline.
- Filters are chips that scroll sideways.
- Confidence is text plus dots, never colour only.

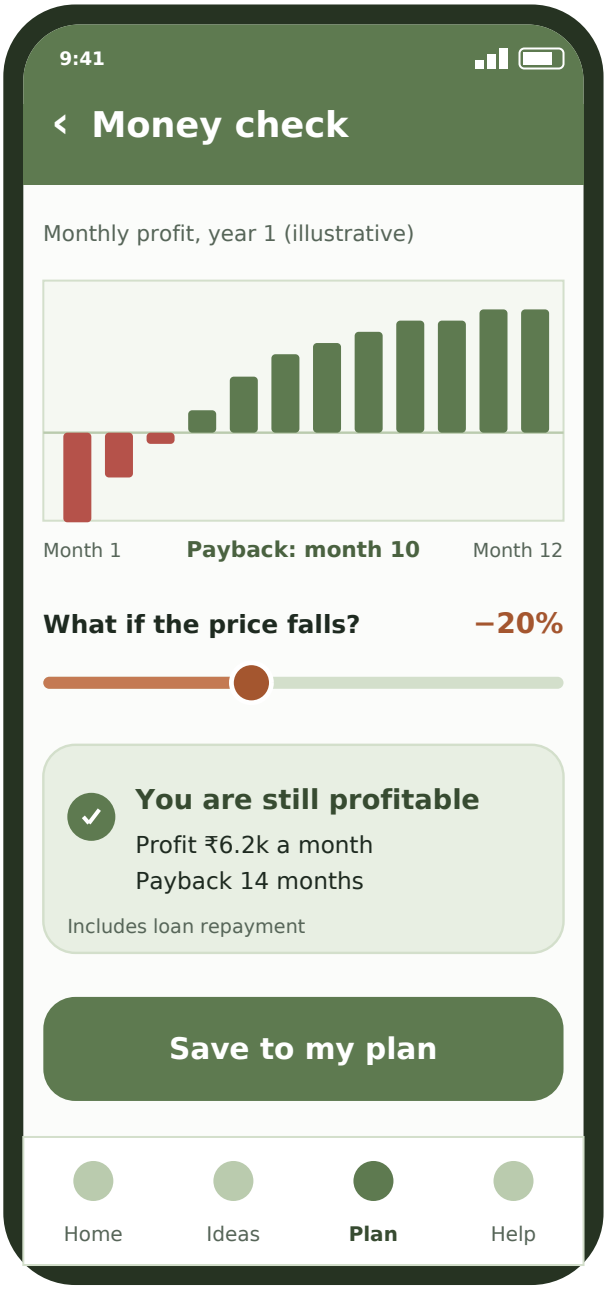

S6 Compare

Side-by-side view of two ideas. The better value per row is tinted and ticked.

- Rows use the same labels as the idea cards.
- A short ‘why’ note explains the recommendation.
- Two clear choices at the bottom.

App screens

S7 Idea detail

Everything needed to decide: 90-day price outlook with uncertainty band, three key numbers and reasons it fits this user.

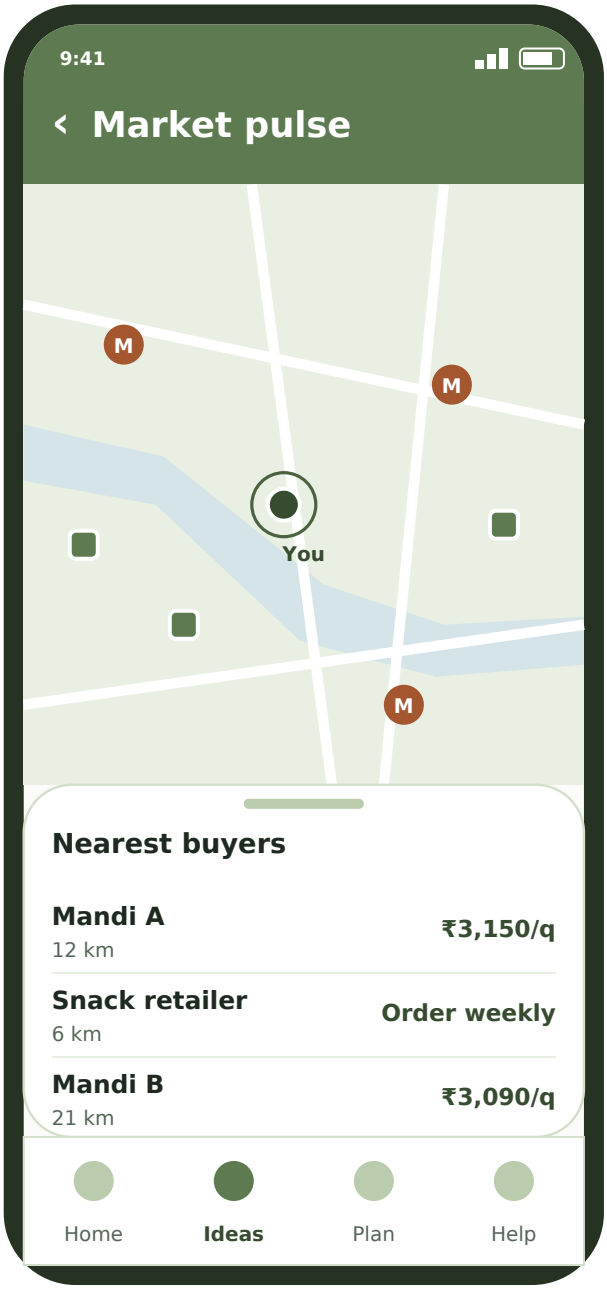

- Lighter band shows the forecast range.
- ‘Why this fits you’ lists three checked reasons.
- One primary action: build the plan.

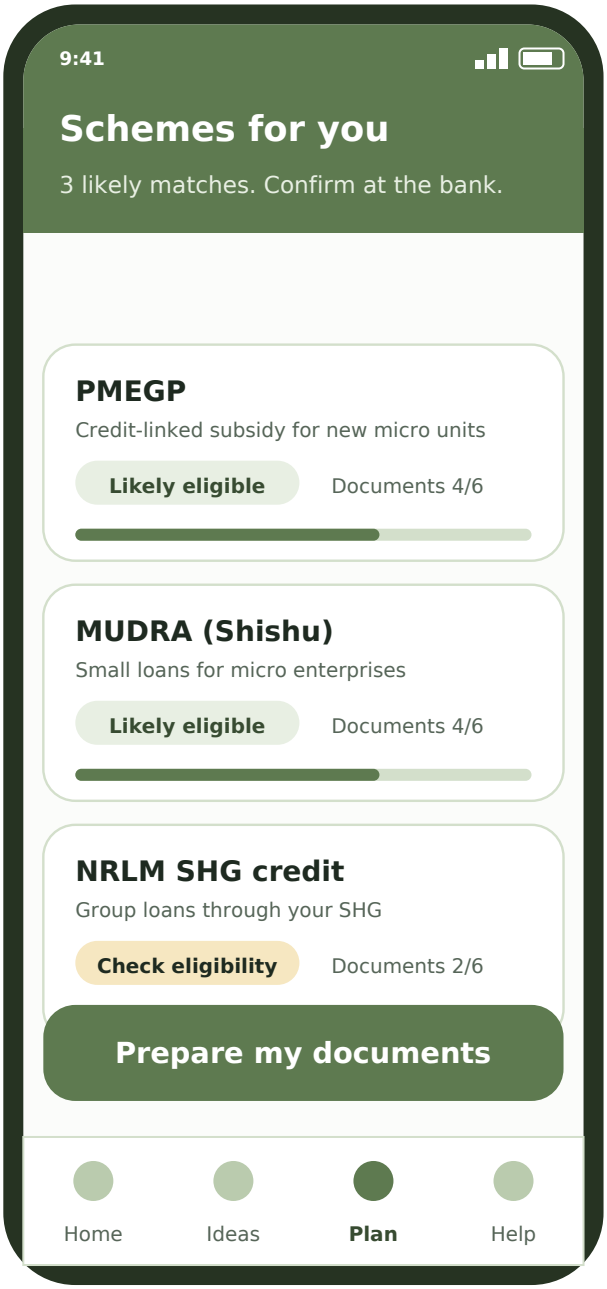

S8 Money check

Year-one cash-flow bars and a stress test slider. Users see they can survive a price drop before they commit.

- Losses in the early months shown in red-brown with the payback month named.
- Slider turns ‘what if’ into a visible answer.
- Result card states the outcome in words.

App screens

S9 Market pulse

Map of nearby mandis and buyers with distance and latest price in a bottom sheet.

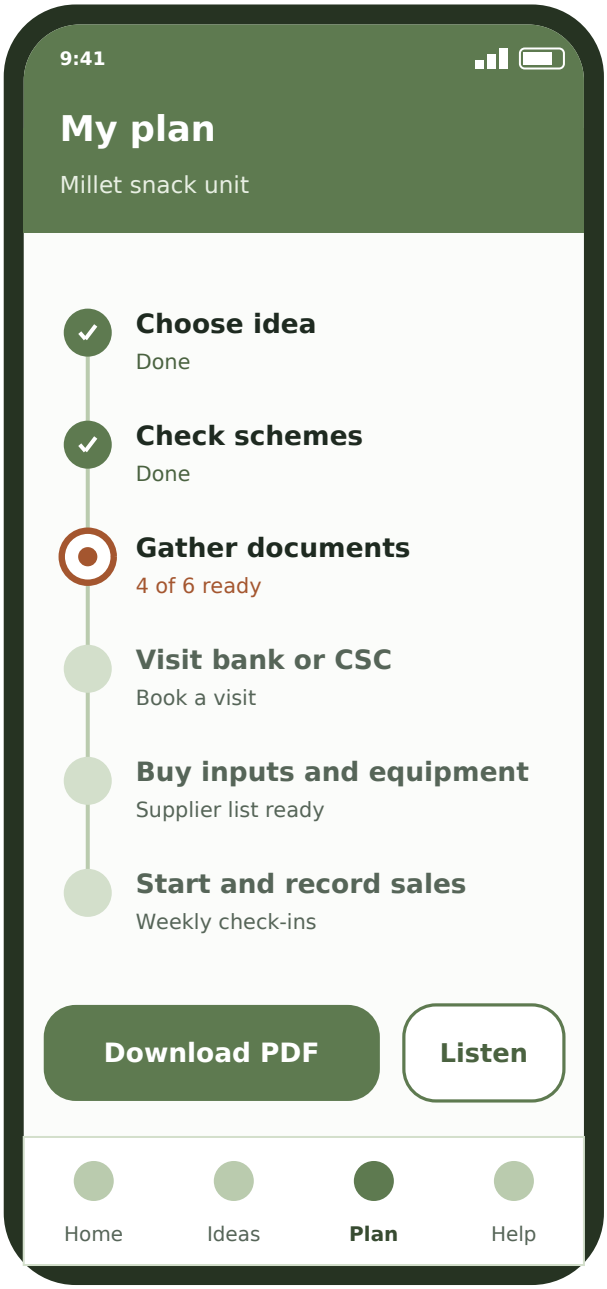

- Pins are shapes as well as colours (circle, square).
- Bottom sheet lists three nearest buyers.
- Works with cached tiles when offline.

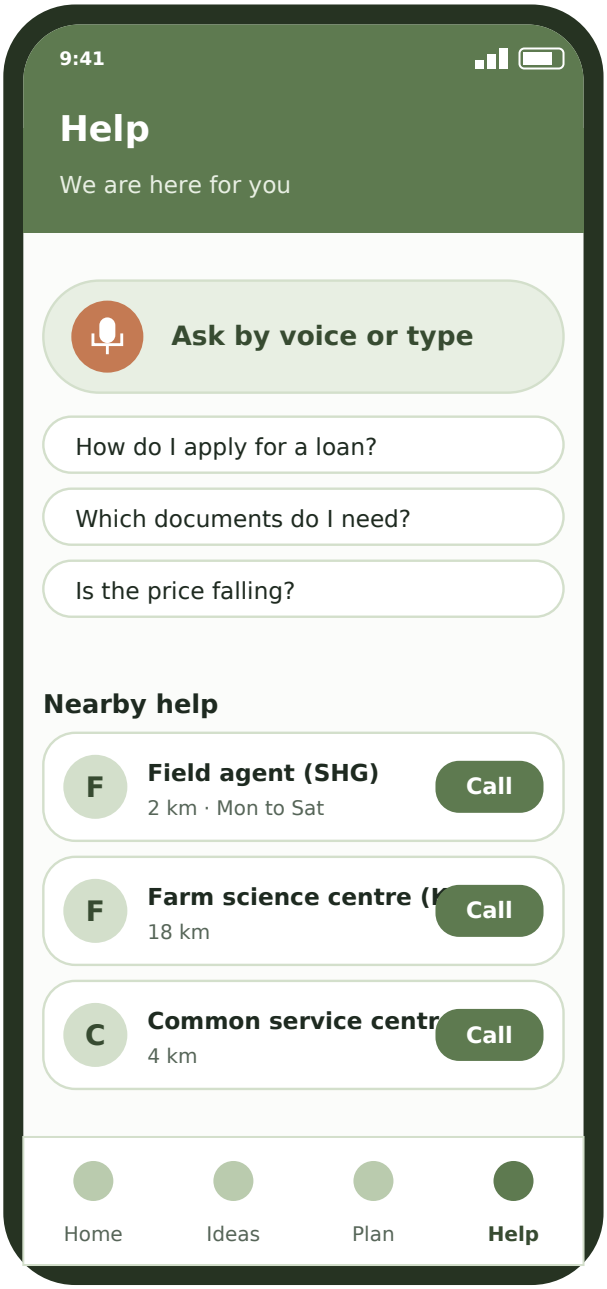

S10 Schemes

Matches government schemes with an eligibility status and a documents progress bar.

- Status chip uses words: Likely eligible or Check eligibility.
- Reminder to confirm rules at the bank.
- Documents screen is one tap away.

App screens

S11 My plan

A six-step timeline from choosing an idea to recording sales. Download and listen options sit at the bottom.

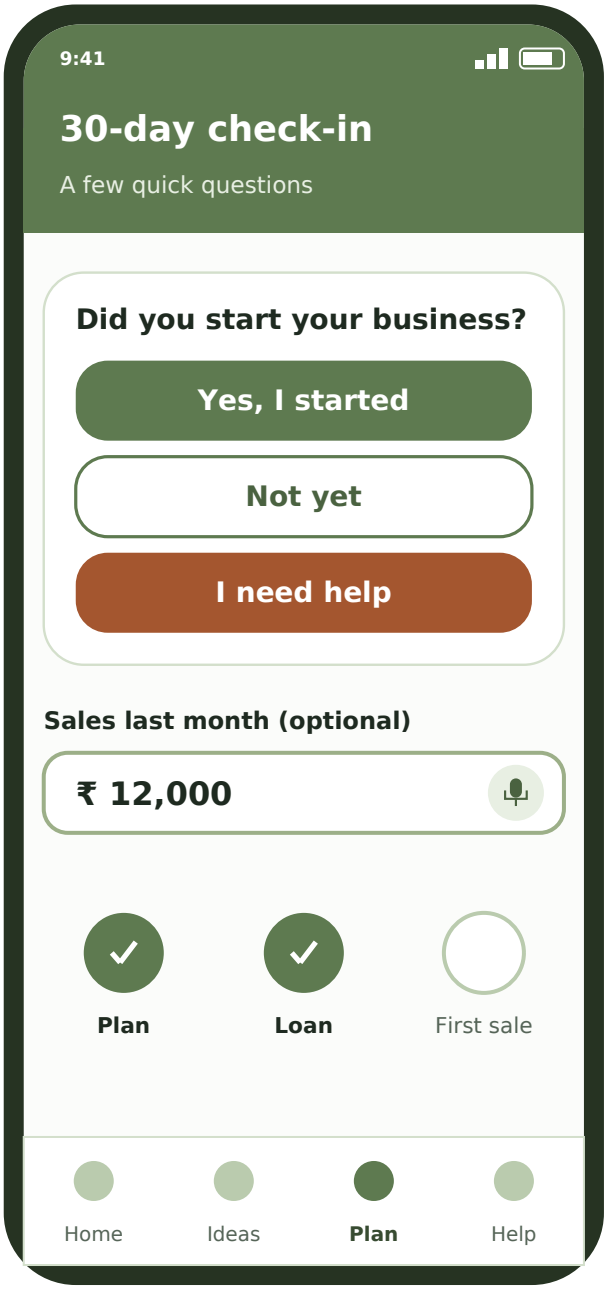

- Done, current and upcoming steps differ by shape.
- Each step has a short supporting line.
- PDF is generated in the chosen language.

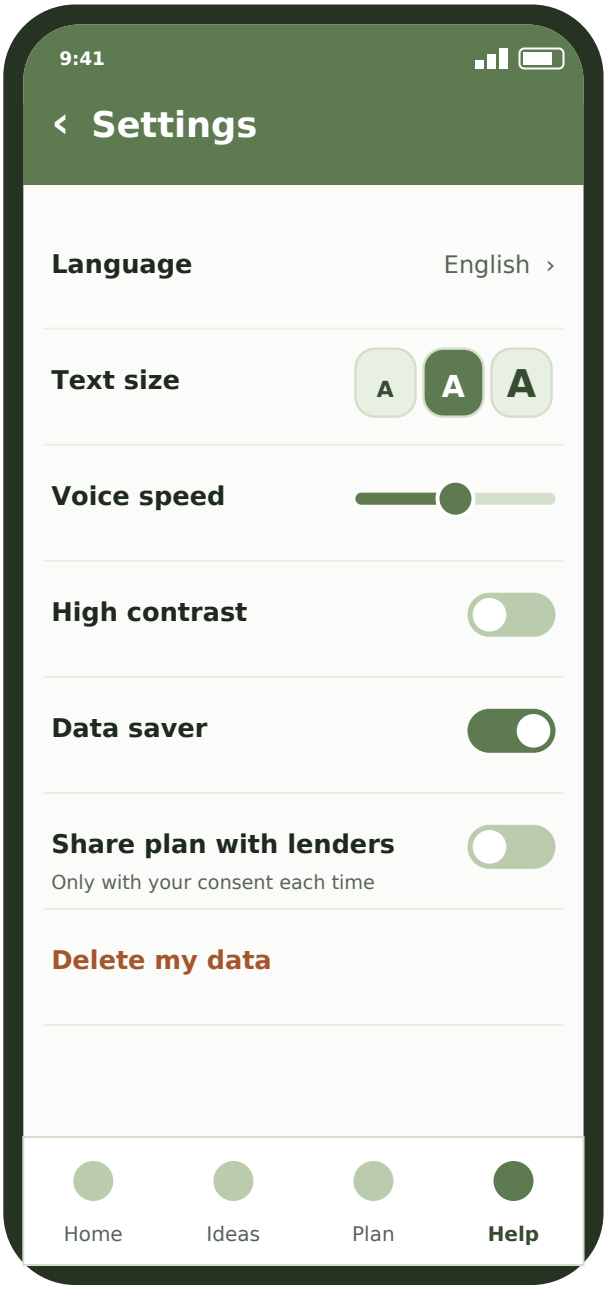

S12 Help

Voice-first help plus real people nearby. The call button is always visible.

- Suggested questions reduce typing.
- Field agent, farm science centre and service centre listed by distance.
- Human hand-off is never hidden.

App screens

S13 Check-in

The 30, 90 and 180-day follow-up that feeds the model and the impact measurement.

- Three large answers; ‘I need help’ in strong accent.
- Optional sales entry by voice or typing.
- Milestone badges celebrate progress.

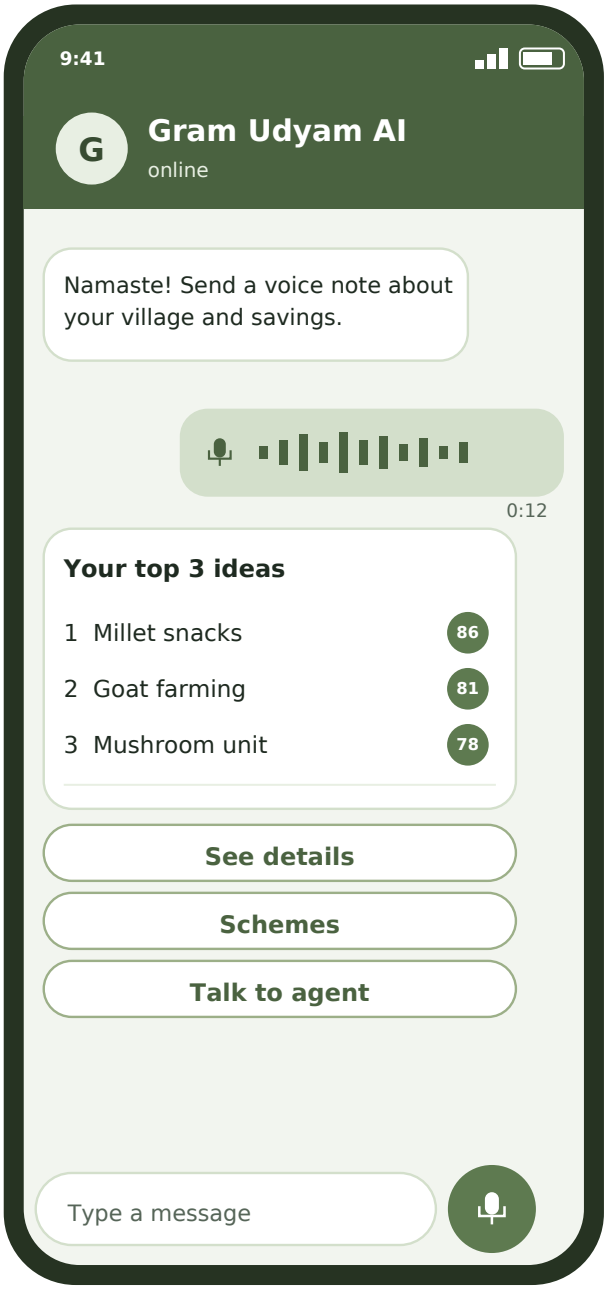

S14 Settings and privacy

Language, text size, voice speed, high contrast, data saver and consent controls.

- Text size has three visible steps.
- Sharing with lenders is off by default and per-consent.
- Delete my data is one tap away.

WhatsApp and IVR

Many users will never install an app. The same recommendation service answers through WhatsApp voice notes and cards, and through a phone call menu.

WhatsApp rules

- Voice note in, voice note and card out; text always accompanies speech.
- At most three quick-reply buttons per message.
- Idea card shows score, setup cost and confidence word.
- Plan PDF sent as a document in the user’s language.
- Opt-in message first; easy ‘STOP’ command; no marketing without consent.

IVR call menu

Press 1	Hear my top ideas
Press 2	Hear about schemes
Press 3	Check market prices
Press 4	Talk to a field agent
Press 9	Change language
Press 0	Repeat

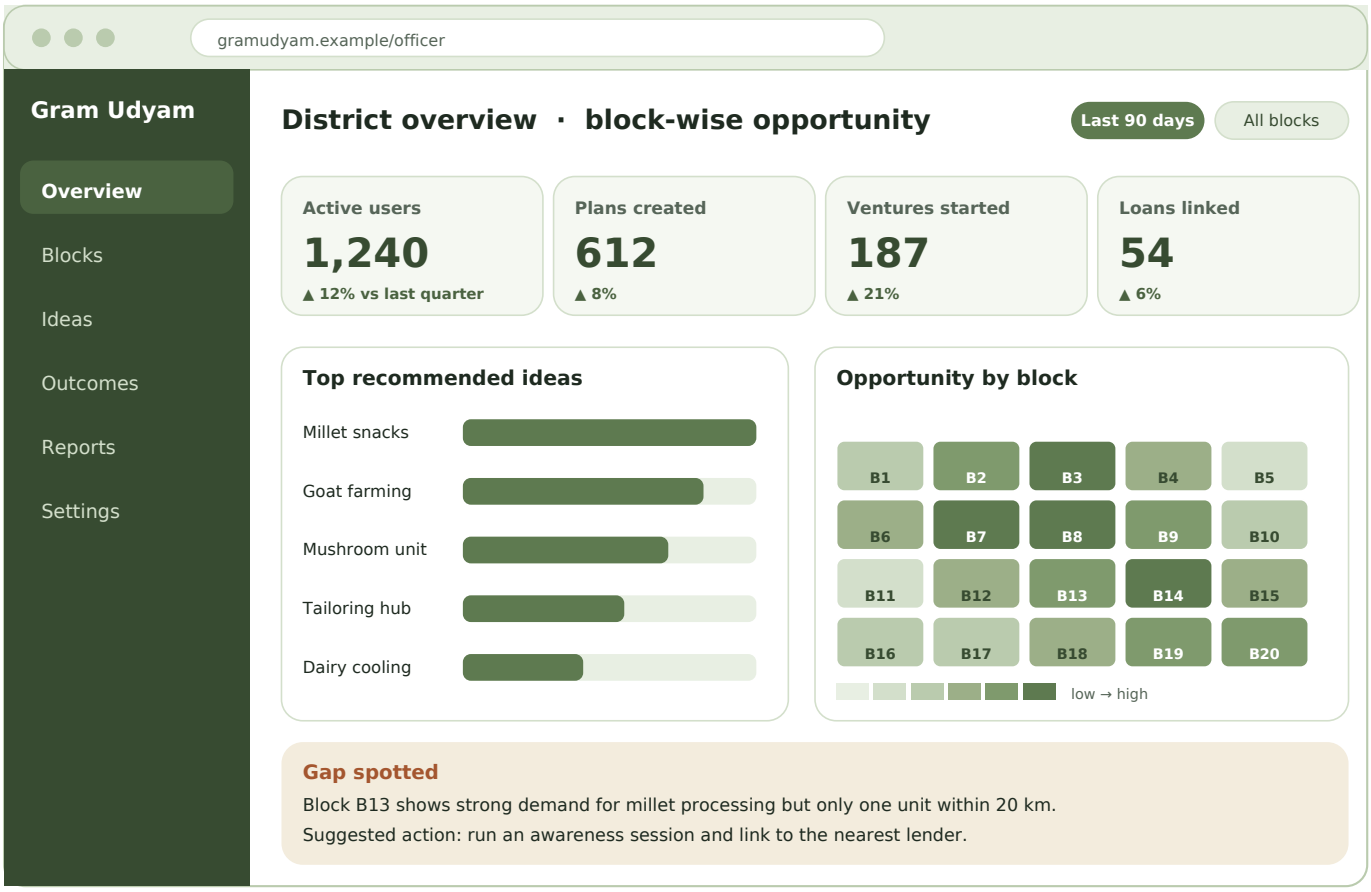

SMS summary

Gram Udyam: Top idea for you is Millet snack unit (score 86, medium confidence). Setup about ₹1.2L. Reply 1 for schemes, 2 for an agent call. Estimates only; confirm at your bank.

Accessibility across channels

- Same wording and numbers as the app, produced by one explanation service.
- Speech through Bhashini with a second provider as fallback.
- Every call or chat can hand over to a human field agent.

Officer dashboard

Design notes

- Same sage palette and components as the app; denser layout on desktop (12-column grid, 1024 px and above).
- Only aggregated numbers are shown. Small counts are suppressed to protect privacy.
- Every chart has a one-line takeaway, a table view and CSV export.
- Filters: block, period, idea category, women and youth share.
- Includes SDG 8 reporting view: enterprises started, still operating, jobs created.

All numbers and block names are placeholders.

Responsive behaviour

360 – 599 px
Phone: single column, bottom tabs

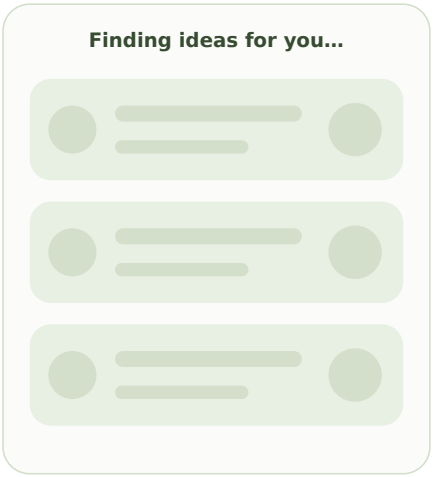

600 – 1023 px
Tablet: list and detail side by side

1024 px and up
Desktop: sidebar + 12-column dashboard

States and edge cases

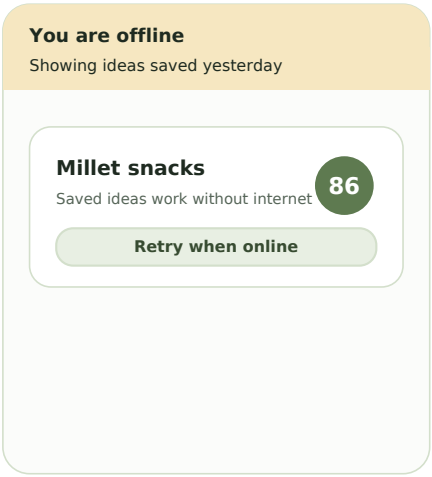

Real users meet slow networks, missing data and consent choices. Each state keeps the tone calm, says what happened in plain words and offers one clear next step.

Loading

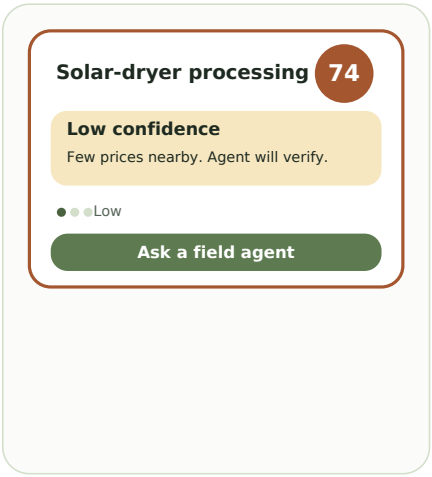

Skeleton cards, no spinner-only screens.

Offline

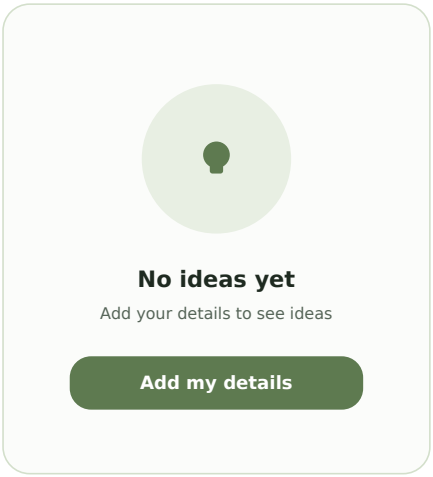

Saved ideas remain usable; banner explains.

Low confidence

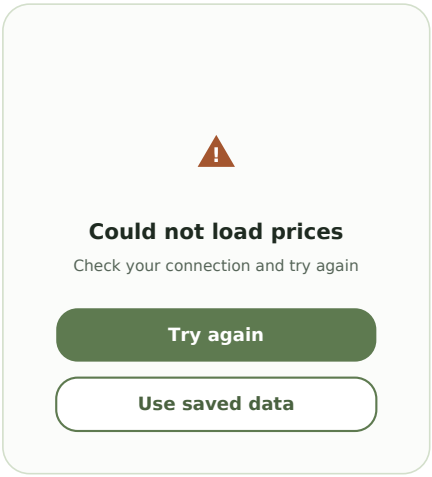

Score is shown but flagged; agent check offered.

Empty

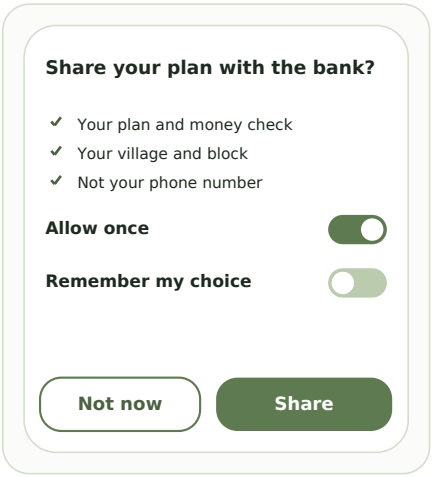

Friendly prompt with one action.

Error

Plain words, retry plus saved fallback.

Consent dialog

Specific, reversible, off by default.

Developer hand-off

What engineers need to build the interface faithfully, quickly and accessibly.

Recommended front-end stack

- Next.js (React) PWA with TypeScript; Tailwind CSS using the tokens below; Radix UI primitives for accessible dialogs, sliders and toggles.
- Service worker for offline cache of last ideas, plan and prices; background sync for check-ins.
- Web Speech or Bhashini streaming for voice; audio kept on device unless the user consents.

Design tokens

```
:root {
  --sage-50:#F5F8F2; --sage-100:#E8EFE3; --sage-200:#D3DFCB; --sage-300:#BACBAE; --sage-400:#9CAF88;
  --sage-500:#7F9A6D; --sage-600:#5E7A50; --sage-700:#4A6240; --sage-800:#374B31; --sage-900:#263322;
  --accent:#C47A53; --accent-strong:#A4562F; --sand:#F3ECDD; --ink:#1E2A20; --muted:#566558;
  --warning:#D9A441; --error:#B5524A; --radius:14px; --tap:48px; --gap:8px;
  --font:"Noto Sans","Noto Sans Devanagari","Noto Sans Tamil","Noto Sans Telugu",system-ui,sans-serif;
}  /* dark mode: swap page to sage-900, cards to #2F3E2C, text to sage-50 */
```

Accessibility checklist (WCAG 2.2 AA)

- Contrast verified for every token pair; no information by colour alone.
- All controls reachable by keyboard and screen reader; visible focus ring (2 px sage-800 with white offset).
- Respect prefers-reduced-motion; animations 150–200 ms, ease-out; no auto-playing audio.
- Text resizes to 200% without loss; targets at least 48 px.
- Every image and icon has a text alternative; every audio output has a transcript.
- Language tag set per screen so the right voice and font load.

Performance budget

- First load under 200 KB gzipped on 3G; time to interactive under 4 s on a low-end Android.
- Lazy-load maps and charts; use SVG charts; no web fonts beyond the chosen script subset.
- Cache API responses (prices 6 h, climate 24 h, ideas until profile changes).

Analytics events (consented, no personal content)

- onboarding_completed, idea_viewed, idea_compared, stress_test_used, scheme_opened, plan_downloaded, help_called, checkin_submitted.
- Each event carries language, channel and model version, never raw voice or free text.

QA checklist before release

- Run on a 5-year-old Android phone with a throttled network.
- Test all 8 launch languages for text overflow and speech quality.
- Test with a screen reader and at maximum text size.
- Usability test with 30 target users: task completion at least 80%, SUS at least 70.
